"Isolation and primary structure of a peptide from the corpora
cardiaca of Hellothis zea with adipokinetic activity.";

Blochem. Blophys. Res. Commun. 135:622-628(1986).

-I- FUNCTION: This hormone, released from cells in the corpora
cardiaca after the beginning of flight, causes release of
diglycerides from the fat body and then stimulates the flight
muscles to use these diglycerides as an energy source.
-I- SUBCELLULAR LOCATION: Secreted.
-I- SIMILARITY: Belongs to the AKH / HRTH / RPCH family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
